

MB Stone Soap Film & Mineral Deposit Remover Soap Film Remover Instructions

MB-3 is a unique combination of non-acid chemicals designed to dissolve and remove soap scum and hard water mineral deposits. Use it on natural stone countertops, floors, shower walls, sinks, and tubs. It will even do a great job removing hard water deposits on glass shower doors. MB-3 is effective and safe on most polished stone surfaces. Make sure to test the product in an inconspicuous area as a precaution before use.

Directions:

Dilute MB-3 in a proportion of 1 to 2 with warm water. Apply liberally with a sponge and let stand until soap scum begins to break up. Do not let solution dry. Scrub lightly with a scrub brush or plastic scouring pad. Rinse thoroughly with clean water. Repeat if necessary. Drying is not required.

Use rubber gloves to avoid contact with skin.
